Oregon's COVID-19 Case Rates by Demographic Group

This dashboard shows the case rates per 100,000 people and the total number of reported COVID-19 cases in Oregon broken out by sex, age group, race, and ethnicity. Use the toggle below to see how many COVID-19 cases in each demographic group were ever hospitalized for their illness and how many have died with COVID-19. Hover over a bar to see the exact number of cases in that category and the percentage of total cases that fall in that category.

COVID-19 Quick Facts: Hospitalization..

Below, you can see the percent of COVID-19 cases who have ever been hospitalized for their illness broken out by sex, age group, race, and ethnicity.

This dashboard reports data of complete weeks, and is updated monthly on the second Wednesday.

*A/AN = American Indian or Alaska Native; Pacific Is. = Native Hawaiian or Other Pacific Islander.

During the course of the case investigation, people are asked to self-report their race, ethnicity, tribal affiliation, country of origin, or ancestry. Many people who consider themselves Hispanic or Latinx, which is an ethnicity, will use one of these or an equivalent term to describe their race, which then gets categorized as "Other" race. Currently, 80.5% of case-patients shown as "Other" race above reported that they are Hispanic or Latinx.

Rates shown on this dashboard are calculated using population estimates from the 2021 Portland State University College of Urban & Public Affairs Population Research Center and 2020 housing and demographic data from the U.S. Census Bureau's American Community Survey (ACS).

COVID-19 data are provisional and subject to change.

 During the course of the case investigation, people are asked to self-report their race, ethnicity, tribal affiliation, country of origin, or ancestry. Many people who consider themselves Hispanic or Latinx, which is an ethnicity, will use one of these or an equivalent term to describe their race, which then gets categorized as "Other" race. Currently, 80.5% of case-patients shown as "Other" race above reported that they are Hispanic or Latinx.
 Rates shown on this dashboard are calculated using population estimates from the 2021 Portland State University College of Urban & Public Affairs Population Research Center and 2020 housing and demographic data from the U.S. Census Bureau's American Community Survey (ACS).
 COVID-19 data are provisional and subject to change.

In this dashboard, we take a look at the trends of hospitalizations and deaths by various factors. Some trends have been converted from counts to rate (per 100,000) for a more accurate comparison of demographics groups that have different population sizes.

Hospitalization Trends Data Death Trends Data

This dashboard reports data of complete weeks, and is updated monthly on the second Wednesday.

*Many people who consider themselves Hispanic or Latinx, which is an ethnicity, will use one of these or an equivalent term to describe their race, which then gets categorized as "Other" race. Currently, 80% of case-patients shown as "Other" race reported that they are Hispanic or Latinx.

During times of COVID-19 surge, hospitalization data ascertainment is delayed and slowed, which is why the total number of hospitalized people is lower than expected. There are likely more hospitalizations for each racial and ethnic group than displayed. However, these data are backfilled at regular intervals and will more accurately reflect the hospitalization data in the future.

The proportion of unknown racial and ethnic identity has risen over time, which decreases the accuracy of data. Because there is no population count for racial category "Unknown," rate cannot be calculated. The hospitalization count is shown in the Summary Table.

In this dashboard, we take a look at the trends of hospitalizations and deaths by various factors. Some trends have been converted from counts to rate (per 100,000) for a more accurate comparison of demographics groups that have different population sizes.
