Testing and Outcomes by County

Oregon's COVID-19 Testing and Outcomes by County

This map shows the number of COVID-19 cases per 10,000 people by county in Oregon.* The number of cases in a community depends, in part, on the number of people who live there. These rates help us compare counties of different sizes more evenly than total case counts alone. Hover over a county in the map below to see the total number of cases, recovered cases, deaths, and positive and negative tests in that county. The table summarizes this inform..

Notes

*Rates shown on this dashboard are calculated using population estimates from the 2019 Annual Population Report from Portland State University's College of Urban & Public Affairs: Population Research Center. For our calculations, we round population numbers to the nearest whole number, resulting in slight variation from the numbers in that report (within +/- 4 persons).
