Oregon, Washington and California issue travel advisories

To fight the rapid spread of COVID-19, the governors of Oregon, Washington and California issued travel advisories urging visitors entering their states or returning home from travel outside these states to self-quarantine. The advisories urge against non-essential out-of-state travel, ask people to self-quarantine for 14 days after arriving from another state or country, and encourage residents to stay local.

Oregon's [travel advisory](#) does not apply to people who cross state borders for "essential travel," including work, study, critical infrastructure support, supply chains, economic services, health, immediate medical care and safety and security.

**Two-week freeze:
New measures
to stop surge**

Weekly cases, hospitalizations set new pandemic highs

Masks required statewide

COVID-19 vaccine one step closer to approval

After the 'freeze,' Oregon will introduce new framework for counties

For hospital capacity data: Please see our [daily COVID-19 update](#) and [Hospital Capacity dashboard](#).

For data on testing at the Oregon State Public Health Laboratory: Please see our [daily COVID-19 update](#).

¹This includes cases confirmed by diagnostic testing and presumptive cases. Presumptive cases are people without a positive diagnostic test who have COVID-19-like symptoms and had close contact with a laboratory confirmed case. Antibody test results are **not** included in our data. County of residence for cases may change as new information becomes available. If changes occur, we will update our counts accordingly.

²For additional details on individuals who have died from COVID-19 in Oregon, please refer to our press releases.

³This includes cases who test negative and are not epi-linked to a confirmed case.

⁴Ever hospitalized, if available, as reported to OPERA. OPERA is the state of Oregon's electronic disease surveillance system for COVID-19. Cases are considered hospitalized if they were ever admitted to the hospital for inpatient care during their COVID-19 illness. Cases who were examined in but not admitted to a hospital may be incorrectly classified as hospitalized until interview and medical record review are complete, leading to fluctuations in the number of hospitalized COVID-19 cases.

Face Covering Facts

FACT: Face coverings are an effective way to slow the spread of COVID-19.

Masks of all types help to contain the droplets and aerosols that spread COVID-19. When combined with physical distancing and hand washing, masks are an excellent way to reduce the spread of disease.

For more information visit healthoregon.org/coronavirus or call 211

Rain and Face Coverings

Letting your face covering get wet may decrease its effectiveness and make it difficult to breathe.

Keep your mask dry by wearing a rain jacket with a hood, carrying an umbrella, or having another means to shield your face covering from the rain. You may also want to carry a spare, just in case.

COVID-19 Facts

FACT: COVID-19 can be dangerous for healthy people.

While we know that age and underlying conditions can make COVID-19 infections more severe, there are many people who are younger or in good health for whom a COVID-19 infection is severe or even deadly.

Flu Vaccine Facts

FACT: There's no evidence that the flu vaccine causes people to be more susceptible to COVID-19.

The single biggest risk factor is risky behavior like exposure to large groups of people without a mask, indoors, for long periods of time. The risk of contracting COVID is not connected to a flu shot.
