Oregon Counties by COVID-19 Risk Level

© 2021 Mapbox © OpenStreetMap

Note: From January 23rd through February 6th, there were 20 adults in custody newly reported to have COVID-19 in Lake County and 8 in Harney County. As these individuals do not interact with members of the broader community, the numbers are being subtracted from both county's total cases of COVID-19 for determination of county risk level. Based on these updated numbers of cases Lake County will move from Lower Risk to Moderate Risk and Harney County will stay at Lower Risk on February 12th.

Oregon Health Authority (OHA) is monitoring indicators of COVID-19 disease spread in Oregon and our public health response. The data shown on these additional tabs are separate from Oregon's Risk and Protection Framework. These public health indicators help OHA understand the health impact of COVID-19 in communities across the state and make recommendations as appropriate.

This dashboard will be updated weekly.

Data current as of 12:01am 2/16/2021

COVID-19 Disease Spread

[Public Health Response](#)

Oregon's COVID-19 Disease Spread

We want to be sure the spread of COVID-19 Oregon remains low enough to keep Oregonians safe. We track how many people visit the emergency department for COVID-like illness, how many people with COVID-19 are admitted to the hospital, and the number of congregate living facilities with active outbreaks. These are early warning indicators of severe disease spread. Hover over the charts to l..

Percent of emergency department visits for COVID-19-like illness (CLI)

Lower is better on this indicator

Hospital admissions of COVID-19 cases

These charts show the number of COVID-19 cases admitted to a hospital each week. The orange line represents a 2-week moving average.

Lower is better on this indicator

Number of congregate living facilities with active outbreaks

OHA is publishing data on cases and deaths in care facilities, senior living communities, and congregate living settings that have three or more confirmed COVID-19 cases or one or more deaths in the Weekly Outbreak Report, published on Wednesdays.

COVID-19 Disease Spread

Public Health Response

Oregon's Public Health Response

This page shows how well public and tribal health authorities are following up with Oregonians after they are diagnosed with COVID-19. Following up with cases is important because it lets Oregonians know when they need to self-isolate or quarantine to help stop the spread of disease. This is how we identify close contacts who might have been exposed to COVID-19. Hover over the charts to learn more.

Percentage of COVID-19 cases with follow up initiated within 24 hours

Public health wants to quickly initiate active monitoring and contact tracing of COVID-19 cases. These charts show the percentage of new COVID-19 cases that public health initiated follow up with within 24 hours of identifying the new case.

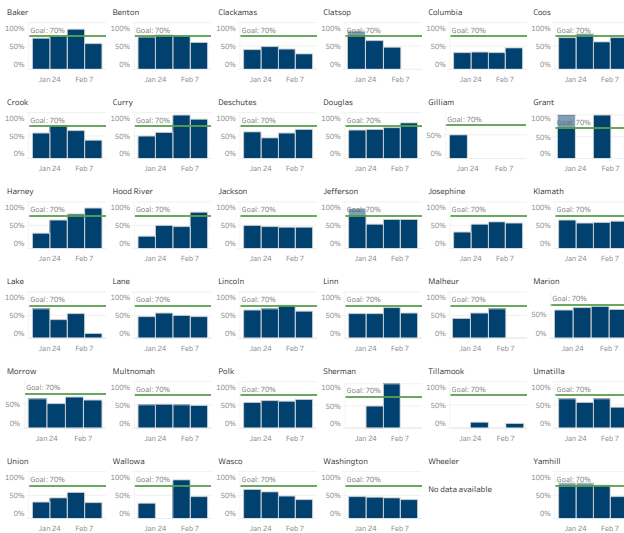

Higher is better on this indicator

Percentage of COVID-19 cases traced to a known source

The charts below show the percentage of new cases traced to a known source of COVID-19. As public health is able to trace more cases to known sources, fewer cases are categorized as sporadic which indicates lower community spread.

Higher is better on this indicator

Notes

† Case Identification Date is the date when a COVID-19 case was identified as a true case by public health.

COVID-19 data are provisional and subject to change.
