† During the course of the case investigation, people are asked to self-report their race, ethnicity, tribal affiliation, country of origin, or ancestry. Many people who consider themselves Hispanic or Latinx, which is an ethnicity, will use one of these or an equivalent term to describe their race, which then gets categorized as "Other" race. Currently, 90.8% of case-patients shown as "Other" race above reported that they are Hispanic or Latinx.

COVID-19 Deaths In Oregon

Length of Illness

Among those who have died with COVID-19, OHA defines length of illness as the number of days from onset date to the date of death. Onset date is the date a person started having symptoms. If symptom start date is not reported their onset date is calculated as two days before the specimen was collected for testing. This means that the length of illness presented here is a conservative estimate of actual length of illness.

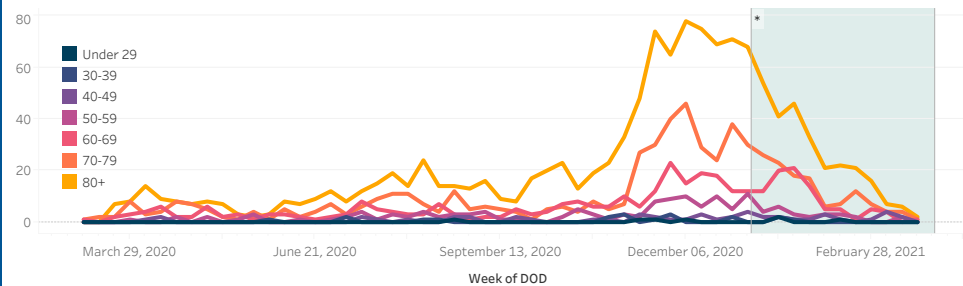

The Median Length of Illness for those who have lost their lives is **14** days.

Deaths by Week (Hospitalization Status and Age Group)

The graph below depicts the number of Oregonians who have died with COVID-19 by week of death and either their age group or whether they were hospitalized during the course of their illness. Use the toggle to switch between age group and hospitalization status.

Deaths by Day and Congregate Living Status

The graph below displays Oregonians who have died with COVID-19 by the date of death and congregate living status. Congregate living situations include, but are not limited to, long-term care facilities, group homes, prisons, and shelters. The date of death represents the exact date on which a person with COVID-19 died and is different from the day a death is reported to public health. By default, the graph is set to display the last three m.
