

## CURRENT CRAB BIOTOXIN DATA

The data below contain recent crab biotoxin data. Crab are much more susceptible to taking up Domoic Acid (DA) than Paralytic Shellfish Toxin (PST). Domoic Acid (DA) is measured in parts per million (ppm). The closure limit for DA in crab viscera (guts or “butter”) is 30 ppm, and the closure limit for crab meat is 20 ppm. Results in **RED** are above the Closure Level for recreational and commercial harvesting. ODA and ODFW may jointly re-open recreational harvesting if two consecutive samples from the ocean area both have lab results below the Closure Limit. Please see the Biotoxin Map on our website for recreational shellfish closure areas.
