## COVID-19 Deaths In Oregon

### Deaths by Week (Hospitalization Status and Age Group)

The graphs below depict the number of Oregonians who have died with COVID-19 by week of death and either their age group or whether they were hospitalized during the course of their illness.

### Deaths by Day and Congregate Living Status

The graph below displays Oregonians who have died with COVID-19 by the date of death and congregate living status. Congregate living status includes, but is not limited to, long-term care facilities, group homes, prisons, and shelters. The date of death represents the most date on which a person with COVID-19 died and is different from the day a death is reported to public health. By default, the graph is set to display the last three months of deaths. Use the filter below to view data from other time periods.

### Length of Illness

How long does it take for someone to die with COVID-19? One definition of illness is the number of days from onset date to the date of death. Onset date is the date a person started having symptoms of infection and date is not reported that onset date is calculated as two days before the specimen was collected for testing. This means that the length of illness presented here is a conservative estimate of actual length of illness.

The Median Length of Illness for those who have lost their lives is **14 days**.

### Underlying Conditions

The graph below displays Oregonians who have died with COVID-19 by underlying condition.
