[More about these data](#) ⓘ

Oregon's COVID-19 Community Transmission

This page shows the evidence-based metrics Oregon public health officials and the CDC are using to track and report COVID-19 community transmission. The indicators are determined by case rates and test positivity in the previous week (Sunday to Saturday). If the two indicators suggest different transmission levels, the higher level is selected. A table with the indicator thresholds is included below.

Hover over a county to see more information

Statewide

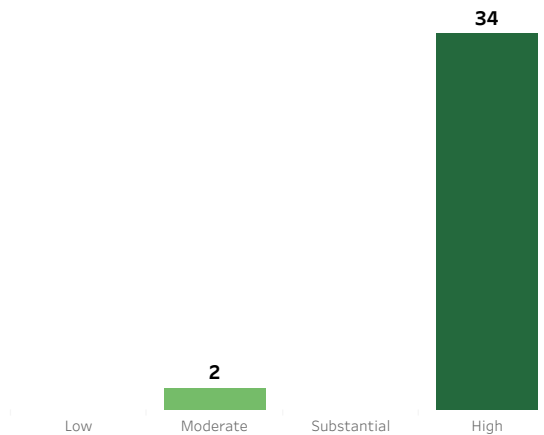

Week of **8/15/2021**
340.6 cases per 100k residents
12.2% test positivity

Community Transmission

- High
- Moderate

Select one of the bars below to highlight the counties in that level of community transmission.

Counties by Level of Community Transmission

Indicators

Total new cases per 100,000 persons in the past 7 days

Percentage of test positivity over 14 days

	Low Transmission	Moderate Transmission	Substantial Transmission	High Transmission
Total new cases per 100,000 persons in the past 7 days	<10.0	10.0 to <50.0	50.0 to <100.0	≥100.0
Percentage of test positivity over 14 days	<5.0%	5.0% to <8.0%	8.0% to <10.0%	≥10.0%

Indicators of Severe Disease

[Public Health Response](#)

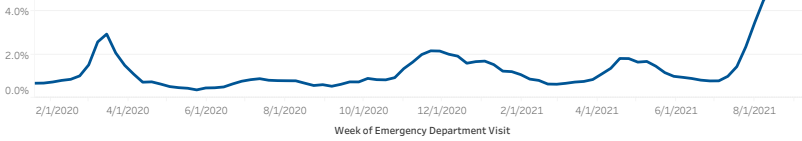

Oregon's COVID-19 Disease Spread

We want to be sure the spread of COVID-19 Oregon remains low enough to keep Oregonians safe. We track how many people visit the emergency department for COVID-like illness, how many people with COVID-19 are admitted to the hospital, and the number of congregate living facilities with active outbreaks. These are early warning indicators of severe disease spread. Hover over the charts to l...

Emergency department visits for COVID-19-like illness have increased since the beginning of July 2021

This chart shows the percent of statewide emergency department visits for COVID-19-like illness (CLI) each week.

Lower is better on this indicator

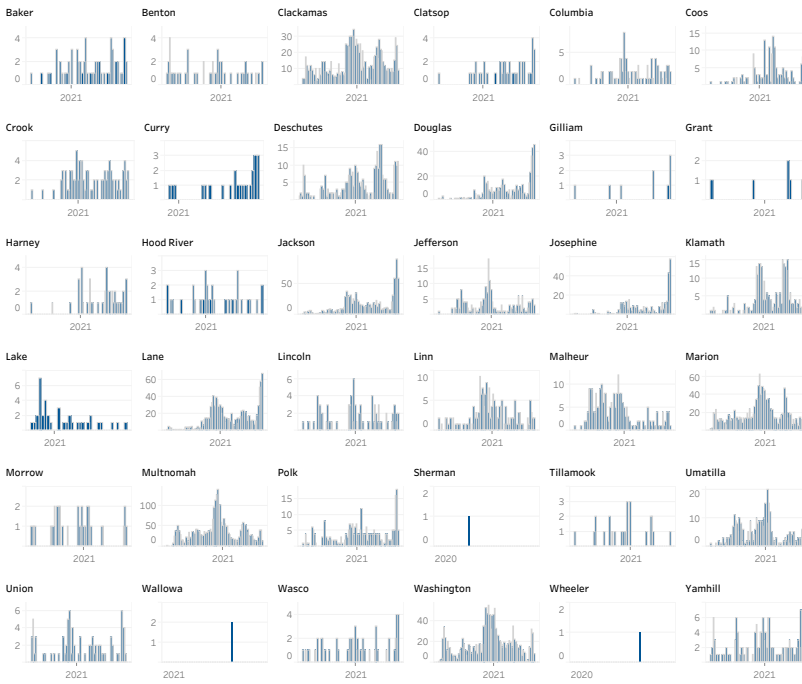

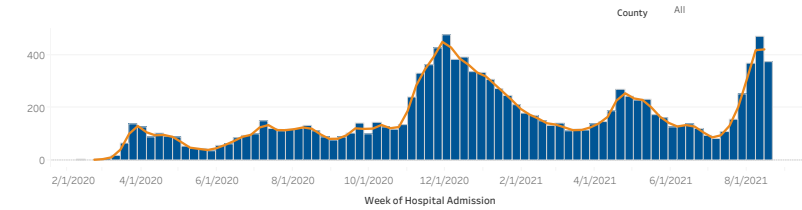

New hospital admissions of COVID-19 cases have increased since the beginning of July 2021

These charts show the number of COVID-19 case hospital admissions each week reported to the COVID-19 case investigation database Opera. The orange line represents a 2-week moving average.

Lower is better on this indicator

More on OHA's hospitalization data sources

Number of congregate living facilities with active outbreaks

OHA is publishing data on cases and deaths in care facilities, senior living communities, and congregate living settings that have three or more confirmed COVID-19 cases or one or more deaths in the Weekly Outbreak Report. Click the orange button to open this report.

COVID-19 Community Spread Indicators of Severe Disease Public Health Response

Oregon's Public Health Response

This page shows how well public and tribal health authorities are following up with Oregonians after they are diagnosed with COVID-19. Following up with cases is important because it lets Oregonians know when they need to self-isolate or quarantine to help stop the spread of disease. This is also how case investigators identify potential sources of infection, either known (close contact to another case).

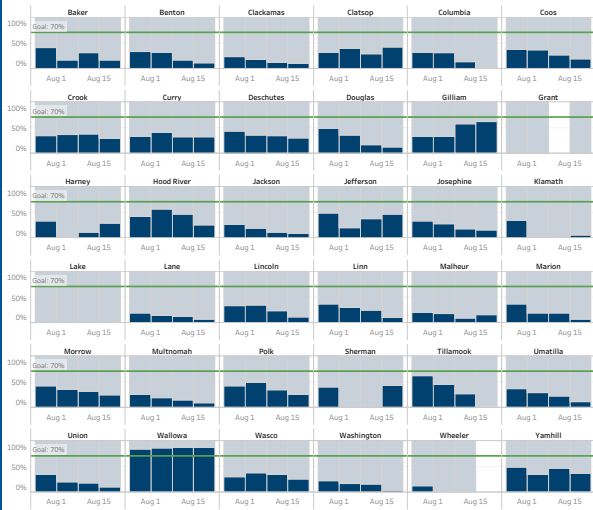

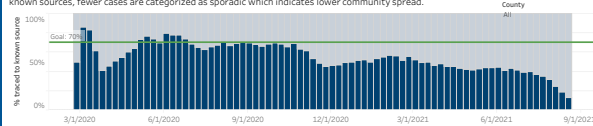

Timely public health follow-up has decreased when case counts have increased

When a COVID-19 case is reported, public health wants to quickly initiate active monitoring and contact tracing. As the number of new cases increase, public health resources can be stretched thin and cause timely follow-up to decrease. These charts show the weekly percentage of COVID-19 cases where public health initiated follow up within 24 hours of case report, and the number of new cases reported to public health. Hover over the charts for more information or filter by county using the dropdown.

The percentage of COVID-19 cases traced to a known source remains low, indicating continued community spread

The charts below show the percentage of new cases traced to a known source of COVID-19. As public health is able to trace more cases to known sources, fewer cases are categorized as sporadic which indicates lower community spread.

Notes
 * Week Case was Reported to Public Health is the date when a COVID-19 case was identified as a confirmed or presumptive case by public health. Case investigation practices changed to initiating case interviews within one local public health business day on July 6, 2021.

COVID-19 data are provisional and subject to change.
