Oregon's Epidemiologic Curve

When people say we want to "flatten the curve," this is the curve they are talking about. An epidemiologic curve, or epi curve, shows the number of COVID-19 cases by date of illness onset. Sudden surges of COVID-19 infections can lead to more people needing medical care than our hospital systems can treat at one time. By "flatten the curve" we mean we want to slow the number of new cases of COVID-19 so our healthcare system is not overwhelmed and can provide care to everyone who needs it. Vaccination is the safest and most effective way to stop the spread of COVID-19.

This chart shows the number of Oregonians who have been identified as COVID-19 cases and whether they were ever hospitalized for their illness ‡

Total Cases 665,486

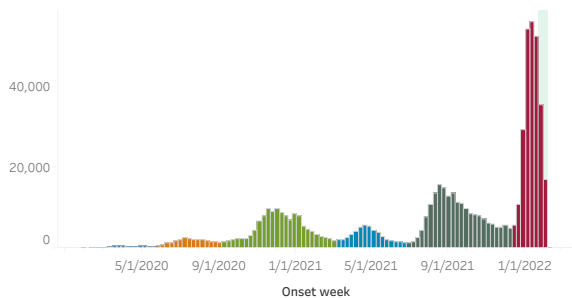

Oregon's COVID-19 cases have come in waves

As is common for infectious diseases, COVID-19 has been marked by rises and falls of varying sizes in new case counts as factors like new variants, vaccinations, and people gathering affect its spread. The charts below estimate statewide waves by assigning the lowest weekly (Sunday to Saturday) case count between peaks as the end of the previous wave. The third statewide wave (which peaked in winter 2020) and the fifth statewide wave (which peaked in summer 2021) were the longest in duration. The sixth statewide wave has the highest number of weekly cases. To allow for some variation in the data, a new statewide wave will not be assigned until three consecutive weeks of increased case counts are reported.

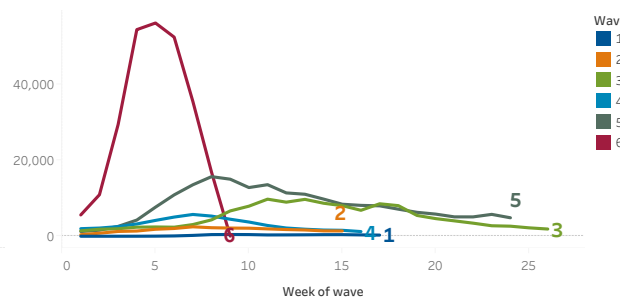

Filter by county to explore how county-level trends compare to statewide waves.

County Oregon, statewide

Oregon, statewide cases by onset week, labeled by statewide wave

Oregon, statewide cases by week of wave, labeled by statewide wave

Note: The shaded area shows the past 17 days. Not all people who got sick during this time period have been reported yet to OHA.

Note: Data from the most recent weeks are incomplete. Not all people who got sick during this time period have been reported yet to OHA.

Notes:

‡ Cases are counted by onset date (the date the person started having symptoms). When a person with symptoms did not report their onset date or when a person without symptoms is tested, their onset date is calculated as 2 days before the specimen was collected for testing.

‡ COVID-19 cases include both confirmed and presumptive cases.

COVID-19 data are provisional and subject to change.

Notes:

†Tests are counted by the date the electronic laboratory report (ELR) or other electronic test report was received by Public Health. Counts reflect individual tests and not individual persons tested.

These are data from HL7 and CSV electronic laboratory reports or the Oregon COVID-19 Reporting Portal and do not include results received via fax or eCR. Non-antibody and non-'info only' COVID results are deduplicated based on medical record number (MRN), accession number, facility and result daily.

COVID-19 data are provisional and subject to change.

- Positive Tests

Weekly Positive and Negative COVID-19 test counts over time - All

This stacked bar chart shows weekly total tests by the date reported to public health and result, positive or negative.

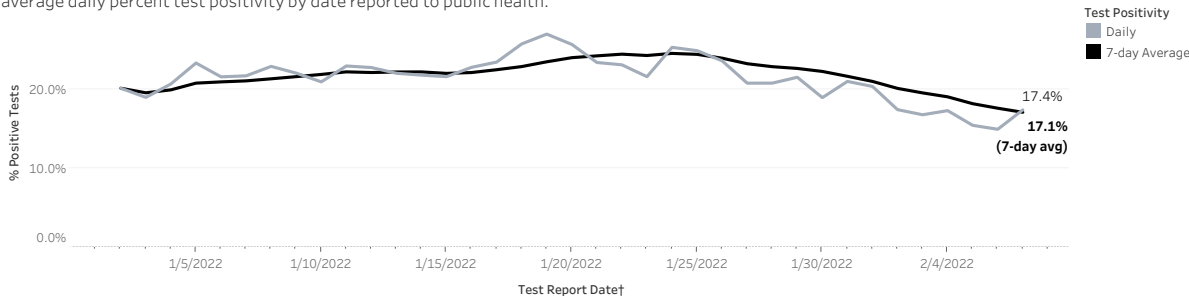

Weekly test positivity over time - All

This line chart shows the weekly percent test positivity, the number of positive tests divided by the number of total tests, by date reported to public health.

Daily test positivity for the past six weeks - All

This line chart shows the daily percent test positivity, the number of positive tests divided by the number of total tests, and the 7-day average daily percent test positivity by date reported to public health.

Notes:

1. County-level Epi Curve Summary Table: Cases by onset date and hospitalization status

This table shows the number of Oregonians who have been identified as COVID-19 cases by date of illness onset, and whether they were ever hospitalized for their illness.

Onset date is the date the person started having symptoms. When a person with symptoms did not report their onset date or when a person without symptoms is tested, their onset date is calculated as 2 days before the specimen was collected for testing.

COVID-19 **cases** include both confirmed and presumptive cases.

The table below is showing **Oregon, statewide** data.

County	Onset	Case Count	Not Hospitalized	Hospitalized	Unknown
Oregon, statewide	9/8/2021	2,022	679	94	1,249

1. County-level Epi Curve Summary Table: Cases by onset date and hospitalization status

This table shows the number of Oregonians who have been identified as COVID-19 cases by date of illness onset, and whether they were ever hospitalized for their illness.

Onset date is the date the person started having symptoms. When a person with symptoms did not report their onset date or when a person without symptoms is tested, their onset date is calculated as 2 days before the specimen was collected for testing.

COVID-19 **cases** include both confirmed and presumptive cases.

The table below is showing **Oregon, statewide** data.

County	Onset	Case Count	Not Hospitalized	Hospitalized	Unknown
Oregon, statewide	12/16/2020	1,184	682	58	444

1. County-level Epi Curve Summary Table: Cases by onset date and hospitalization status

This table shows the number of Oregonians who have been identified as COVID-19 cases by date of illness onset, and whether they were ever hospitalized for their illness.

Onset date is the date the person started having symptoms. When a person with symptoms did not report their onset date or when a person without symptoms is tested, their onset date is calculated as 2 days before the specimen was collected for testing.

COVID-19 **cases** include both confirmed and presumptive cases.

The table below is showing **Oregon, statewide** data.

County	Onset	Case Count	Not Hospitalized	Hospitalized	Unknown
