

## MUSSEL AND CLAM BIOTOXIN LAB RESULTS

The data below contain recent molluscan bi-valve shellfish (clams, oysters and mussels) biotoxin data. Paralytic Shellfish Toxin (PST) is measured in micrograms per 100 grams ( $\mu\text{g}/100\text{ gm}$ ) of shellfish meats and Domoic Acid toxin (DA) is measured in parts per million (ppm). A result of 80 or above for PST is the closure limit. A result of 20 or above for DA is the closure limit. **Results in RED means there is a closure for that species in that area for recreational and commercial harvesting.** For crab biotoxin results please see the link on the Shellfish webpage. ODA and ODFW may jointly re-open recreational harvesting if two consecutive samples from the same species and the same beaches, both have lab results below the closure limit. Please see the Biotoxin Map or the recreational shellfish biotoxin closures webpage for recreational shellfish closure details and areas.

Note: a sample from anywhere in the Clatsop Beach area represents all the Clatsop Beaches.

DATE	LOCATION	SPECIES	PST	DA
The next sampling week: 2/28/22				
2/18/22	Clatsop Beaches, Sunset Beach	Razor Clams	<36.8	<5.5
